FEATURED PROJECTS

Restaurant CRM: Full-stack web application for a restaurant to handle all internal actions and data.

Features: User register and login with different roles, order creation inside the restaurant and for delivery and managing employees, the frontend is developed in React using typescript and handles full interaction with the backend that is written in C# with asp.net and database is developed in PostgreSQL, handles all the data in the backend and sends useful information to the frontend.

FoodMart: Full-stack web application for an online food market. Features a frontend with information, discounts and offers, login system for clients and also features roles, admins have access to a dashboard that allows them to see orders, manage products and information that's shown on the landing page. The current landing page was created in simple html, css and js but im currently porting it to use react and typescript. The backend is made in asp.net and the database is in MySql.

SOFT SKILLS

- Great communication skills.
- Social intelligence and empathy.
- Adaptability to stress or unknown situations.
- Problem solving and critical thinking.
